

## LONG ISLAND IVF PARTICIPATES IN NEW YORK STATE IVF GRANT PROGRAM

Long Island IVF has again been selected by the New York State Department of Health to be a provider in their Infertility Demonstration Program. This Program provides financial support to insured patients without coverage for In Vitro Fertilization (IVF). Long Island IVF offers personalized services at several convenient locations throughout Long Island, in addition to Melville, where the state of the art IVF laboratory is located. Patients might be eligible for the Program if they have a combined gross household income under \$195,000 annually, as determined by their most recent tax returns, and are:

- Privately insured but insurance coverage for IVF procedures is not a covered benefit
- No longer covered for infertility services because their benefit is exhausted
- A resident of New York State
- Between the ages of 21 and 44
- Clinically infertile and meet other health criteria.

IVF services covered in the Program are paid by New York State after reimbursement of any insurance coverage available, and after a cost sharing amount that the patient is required to pay. This cost sharing amount varies by the patient's household income and the cost of the procedures, but cannot exceed ten percent of the patient's gross household income in any one year; therefore, financial support is available on a sliding scale basis.

Patients interested in determining whether they are eligible for participation in the Program should contact our Financial Counselor at **(631) 752-0606** as soon as possible.
